# Batch create Works with one File each

| User | Application |
|---|---|

**Batch create page (1 FileSet = 1 File)**

Selec tand upload one or more files → **Assign default use to each File** ← **Uses config**

**Assign default use to each File** → **Proceed with entering metadata and saving**

---

## Notes

1. In theory there could be no mandatory use, which would allow the creation of Works without FileSets.
